

NEW! High Speed Series 4 Controller

The NEW Vision

Series 4 Controller puts next generation technology in your hands! The enhanced features make it faster, friendlier and easier to use, but its most noticeable update is the included hand help pendant with large full color LCD display and smaller size!

All function controls and display screen are now on the pendant, allowing you the freedom to move about while keeping the pendant in your hands. The new generation controller will be used on all Phoenix 1212, 16 Series, MAX Series, 24 Series, and 25 Series engraving machines and CNC routers. You'll be more productive, finishing projects faster, and easier, with the new Series 4 Controller!

FEATURES

- Engrave up to 10" per second
- Hand-held pendant with large LCD display included
- Adjustable table speed, Z axis speed and dwell
- HPGL/2 and G code compatible
- Programmable defaults and re-engage from any position in the job
